

Wood decks only look good and cost less for the first year

Sure, wood decking can be less expensive to begin with. However, just as you get used to the green tinge and profusion of knots, wood decking starts showing its age. The warm color of wood fades to a dull grey, until mold and mildew turn it green again. Splinters will surface. Boards can crack, warp, twist and sag. Expect nails to rise.

Continuous Maintenance Adds Up

- Eats up your free time
- Runs up expenses

Power Washing, Sanding, Scraping, Staining, and Replacing Twisted Boards

Composites and Capped Composites are the original alternative to wood. But the little bit of wood fiber inside them has led to their downfall.

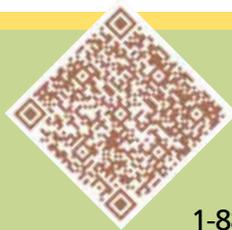

Composites and Capped Composites were intended to be the environmentally friendly replacement for wood decking, but after a lot of the overpromising of 'total maintenance freedom', many shortcomings became evident.

- Colors can fade
- Easily stained
- Retains heat; hot to the touch
- Can deteriorate over time
- Succumbs to mold and mildew
- Absorbs moisture resulting in cracks and bubbles

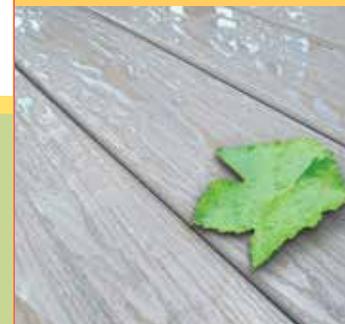

Coordinate or contrast Endeck decking with our Endwood Cellular PVC fencing and our Code Approved Enrail PVC Railing for a distinctive outdoor experience.

Finally, a deck with a pretty, thick skin.

FADE RESISTANT • STAIN RESISTANT • LOW MAINTENANCE

Is it possible that Endeck decking may even outlast your home?

Enduris has been manufacturing and distributing professional quality PVC fence, deck, and railing products since 1998 right here in the USA.

We don't believe in cutting corners and strive to provide a long lasting product that exceeds expectations. Utilizing cutting edge technology, we've engineered Endeck to outlast wood and composite decking, require little to no maintenance, retain color and luster year after year, and be essentially water proof thereby never having issues with mold, mildew, swelling, or splitting.

The results were simply amazing, a deck product that looked and felt like wood, was rugged against the elements yet safe for children and pets, remaining cooler under foot and splinter-free, year after year.

Introducing Endeck Woodland™ Series

Colors to complement your home and landscape; strength to complete your low-maintenance lifestyle.

Endeck captures the classic look and feel of real wood, but leaves the headaches and extra maintenance time and expense behind.

The embossed wood grain on both sides of Endeck's capped cellular PVC deck boards mimic the look and feel of real wood. Woodland's soft earthy hues are a favorite amongst coastal communities for deck and dock applications. Woodland Series decking is also code approved (CCRR-0144) with a Class-A Flame spread.

Tough • Waterproof • Low Maintenance

30 Year Fade & Stain Warranty

Introducing Endeck Forest™ Series

Fade and Stain Resistant — with a deeply embossed wood grain, rich variegated colors and tough.

With an unmatched ability to resist stains and fading, Endeck Forest Series capped cellular decking is sure to provide many years of worry-free enjoyment and may very well outlast your home!

The deep, rich colors that run through Endeck Forest Series lend a natural beauty that is only found on the most expensive, exotic hardwoods. Our process allows for a consistent rough sewn textured plank with subtle color variations as random as those found in nature.

And, even though the colors run dark, Endeck manufacturing technology allows the decking underfoot to remain comfortable, and cooler to the touch—even on the hottest days.
